

DIARRHEA

DIARRHEA IS A NON-SPECIFIC SYMPTOM WITH MANY DIFFERENT CAUSES:

- Stress caused by change in environment, diet or water supply
- Intestinal parasites or bacterial or viral intestinal infections
- Eating too many treats

Overall, the most important things to remember are:

1. Keep the ferret hydrated
2. Feed a soft-food diet
3. Give a high-calorie supplement

No matter the cause, if left untreated, diarrhea may lead to death due to poor nutrient absorption and dehydration.

Use Uncle Jim's Duk Soup Mix to supplement your ferret's regular diet. It helps stimulate their appetite, boost the immune system and balance the ferret's digestive system. Uncle Jim's mixes readily with warm water to form an easy-to-feed paste. It can also be mixed in with the wet food and syringe-fed to an ailing ferret.

LAX

This great-tasting paste is a must-have for all ferret owners. Ferrets that lick their fur are prone to hairballs. Ferret Lax is the perfect remedy for both eliminating existing hairballs and preventing the formation of new ones. It also aids in removing other items which may have been accidentally ingested.
